# Agenda

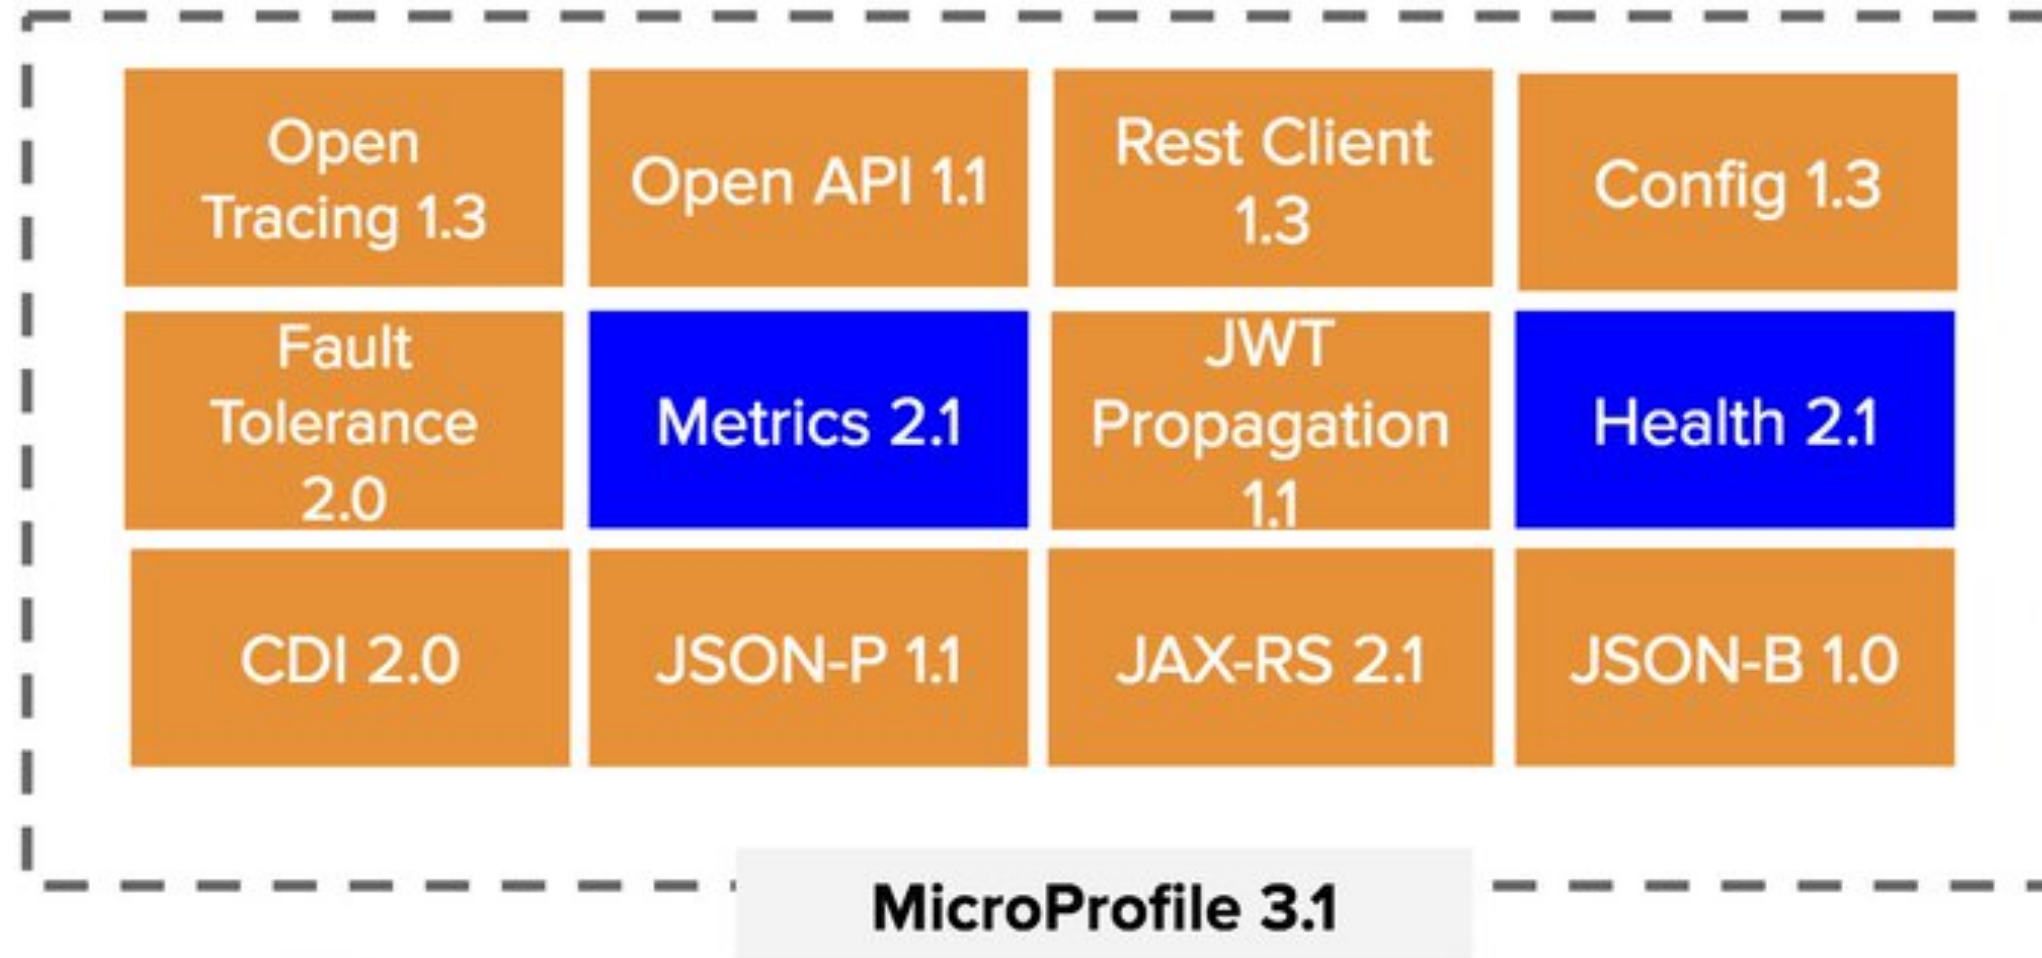

Explaining the magic behind quarkus  
The Jakarta EE foundation: JSON-P, JSON-B, CDI and JAX-RS  
Implementing liveness and readiness probes with Health API  
Fault tolerance: Using Fallbacks, CircuitBreakers, Retries and thread pools for robustness  
JWT Authentication  
Exposing technical and business metrics  
Documenting REST endpoints with OpenAPI  
Inter-microservice tracing with OpenTracing  
Using Rest Client for Service-to-Service communication  
Configuration with MicroProfile config  
Reactive Messaging with Kafka, SSE, and JMS  
Reactive Streams Operators  
Quarkus on HotSpot  
Targeting native environments  
Using Panache as alternative persistence layer  
Building Quarkus extensions  
Java EE / Jakarta EE to Quarkus migrations  
Integration and System Testing with Quarkus  
Docker and Kubernetes Deployments
